TO: THE ECONOMIC DEVELOPMENT AND PLANNING COMMITTEE

RE: REPORT ON EMPLOYMENT 1981

The 1981 comprehsensive employment survey by place of work has been entered on a new Employment Land Use and Assessment (E.L.A.) Data Bank. Editing of the data proved more time consuming than expected and the report programs based on the E.L.A. Data Bank have yet to be written by the Management Services Division.

The data being released in this report is based on in-house computer report programming to bring the information as soon as possible to the users of the data. Certain area municipalities are already using the data in association with specific studies presently underway.

Eight summer students are being employed for fourteen weeks to visit all new establishments that have commenced operation since last year as well as surveying places of work not surveyed in 1981 and all previous vacant commercial units to create a more current data base.

Reports on the characteristics of departing establishments will be forthcoming later in the year and it is hoped to report on the characteristics of arriving establishments in the first quarter of 1983.

The characteristics of 1981 Employment by Place of Work are described in the attached report. Detailed reports based on an analysis of the data will be produced both by the department and area municipalities at a subsequent time.

RECOMMENDATION:

That the attached report be forwarded to the Sub-committee on Economic Development and circulated to the Area Municipalities and surrounding Regions for their information.

R.J. Bower
Commissioner of Planning

GDN:EMC

REPORT ON EMPLOYMENT 1981

INTRODUCTION

The 1981 employment survey is the first comprehensive field employment survey based on data obtained at place of work. The previous comprehensive survey in 1970 had approximately 45% of its information obtained in the field in 1969 by the then municipal assessors and the balance obtained in 1970 as a result of phone calls, letters and estimates by the planning department staff.

The results show that in 1981, there were some 1,062,000 full-time employees in approximately 63,000 places of work throughout Metropolitan Toronto. It is estimated that full time employment in Metropolitan Toronto grew by over 230,000 jobs between 1970 and 1981. While this growth is somewhat below earlier forecasts, it is significant the employment growth outpaced the population growth within Metro Toronto by more than a 2:1 ratio.

The data presented in this report represents only a general overview and summary of the available information. Data in more geographical or sectoral detail will be available from the Metropolitan Toronto Planning Department Research Division on a cost recovery basis. This report attempts to set out the parameters within which the data can be safely analysed and compared to earlier figures and will lay down a foundation for the Employment, Land Use and Assessment Data Bank updates. Although comparisons between the 1970 data, as well as past forecasts will be inevitably made, it must be emphasized that these should be made in the knowledge of the different methods used in collecting the data.

While the predominant use at each place of work was coded in one of three hundred and seventy-six land use activity categories in this report, data is grouped in four general employment sectors and nine more specific categories as set out below:

4 sectors	9 categories
1. office	1. government office 2. non-government office
2. retail	3. retail shopping 4. retail service (i.e. dry cleaners, beauty parlours)
3. manufacturing	5. manufacturing 6. warehouse/transportation (i.e. bus terminal, storage)
4. institutional/other	7. service accommodation (i.e. motels, hotels, sanatoriums, homes for the aged) 8. institutional 9. recreation

BACKGROUND

Since 1970 the department has sought means to obtain an up-to-date comprehensive employment count on a continuing basis. Previous expectations that the province would undertake this role were not fulfilled. In late 1980 it was decided both for transportation planning purposes and for the understanding of Metropolitan Toronto's economic development trends that it was necessary to undertake a comprehensive survey using departmental staff supplemented by temporary staff to do the field surveys.

Subsequently an Employment, Land Use and Assessment Data Bank was constructed and the 1981 employment and in some cases employment collected in the previous three years' field surveys were entered. Tabulations were then produced followed by extensive editing of the data. A firm base of full time employment now exists. It is proposed that this be updated annually. These annual updates will make it possible to construct useful profiles of the characteristics of both the new arriving establishments and the old department establishments with obvious benefits in assisting economic policy planning.

The evaluation of the pattern of employment change between 1970 and 1981 has to take into account the different survey methods used and the fact that the 1970 employment also included part-time employment, at least for the portion of employment collected by the then municipal assessors. An analysis suggests that in order to reflect 1970 full time employment comparable to the 1981 full time employment survey the total 1970 employment count should be reduced by 100,000. When the 1970 employment is adjusted to reflect full time employment, the growth of employment between 1970 and 1981 is about 230,000 jobs or 20,000 jobs per year.

The subsequent 1976 survey obtained employment estimates in the central area primarily by translating the growth of commercial floor space into employment using floor area per employee factors. Subsequent analysis indicates this method and the factors used over estimated the employment growth. The net result of accepting these 1970 and 1976 employment figures as base data for subsequent forecasting of full time employment contributed to somewhat unrealistic expectations.

Recent forecasts have been further complicated by the changing and uncertain economic climate that has been evolving since 1970. Prior to and in the early seventies the economy was performing well and both people and companies found Metropolitan Toronto an ideal place to locate. It was assumed that the post war growth trend would continue well into the future. The problem then was to provide Metropolitan and local services which were in great demand to meet the needs of a burgeoning economy. By the mid 1970's the population growth in Metropolitan Toronto had slowed down significantly reflecting both general economic trends and the decreasing amount of developable lands within Metropolitan Toronto.

The Management Services Division (M.S.D.), because of other program development priorities, has been unable, up to the present time, to undertake the development of the required employment report programs using the 1981 Employment data base. Planning staff have therefore produced, in-house, some preliminary tabulations to satisfy immediate departmental and area municipality needs. When the report programs are completed by M.S.D. more comprehsensive reports based on an analysis of the data will be produced by the department.

A PRELIMINARY EVALUATION

Care is necessary in making an evaluation of the employment development pattern from 1970 to 1981 due to the different nature of the two employment surveys. However, some general patterns have emerged strongly enough to be considered valid trend indicators.

The distribution of office employment growth together with the decline in the manufacturing sector is the main explanation for the fact that over the last 11 years most of the employment growth occurred away from the wider central area and particularly the old, established industrial areas. Generally, these areas can be described as those located near the lakeshore, or neighbouring the major railway lines throughout the downtown and the boroughs of York and East York.

Office employment has been firmly established as the largest employment sector within Metropolitan Toronto comprising 41% of the total. It had been expected that office employment would become the major component of growth over the last decade. Although the City of Toronto has more than 2/3's of the office space and about 58% of all office employment, the available data permits the conclusion that these proportions have been declining slowly over the last 11 years. It must be pointed out that very little is known about characteristics of office space outside the City of Toronto; consequently collection and analysis of data on existing space, vacancy and rental rates will be required before any conclusions with respect to future allocation of office employment growth can be made. However, Metropolitan Toronto's policies and actions to provide additional infrastructure to suburban office development appears justified by growth trends.

In the manufacturing sector the news is much more negative as only Scarborough seems to have gained in manufacturing employment (1,500 jobs). Of the total loss in manufacturing employment (16% (60,000)), about 2/3's (40,000) occured in the City of Toronto, 15% in York and the rest equally in Etobicoke and East York. North York, which emerged as the municipality with the largest manufacturing employment, remained relatively stable. Two factors have to be taken into consideration here; firstly, in many cases the departing manufacturing activities were replaced either by warehousing, which although less noxious is much less labour

intensive or other activities of completely different nature (e.g. Harbourfront). Secondly, the survey was taken in a period of depressed economic conditions, i.e. fewer workers per establishment, and higher vacancy rates than in 1970. Only future surveys will confirm whether or not the loss of manufacturing employment is permanent or only a temporary phenomenon.

Further detailed analysis will appear in subsequent reports but the following points should be made now:

- comprehensive surveys should be carried out on a regular basis to provide insight into changes in focus of economic growth and the identification of those changes that reflect more or less temporary aberrations;

- while some questions may be asked about the validity of existing 1991 forecasts, the present figures are above all indicators of Metro's economy in 1981. In many instances, and especially in the downtown office area, the figures might provide insufficient indication of the employment that is expected to be there in its fully developed state and with full occupancy of the buildings prevailing.

EMPLOYMENT IN METROPOLITAN TORONTO

FIGURE 1: Employment and Places of Work, 1981

Municipality	Employment #	Employment %	Occupied Establishments #	Occupied Establishments %
City of Toronto	473,049	44.5	30,029	47.6
City of North York	266,772	25.1	12,873	20.4
Borough of Etobicoke	143,250	13.5	7,474	11.8
Borough of Scarborough	119,490	11.2	8,289	13.1

Borough of East York	27,162	2.6	1,739	2.8
TOTAL	1,062,191	100.0	63,095	100.0

For the purpose of analysis, the employment and establishment counts have been aggregated from some 376 individual categories to either four or nine major activity groups. Data by both aggregations are presented in the Appendix unless otherwise mentioned, the analysis presented below deals with the four sectors which are as follows (by order of magnitude):

FIGURE II: Employment and Places of Work by Sector, Metropolitan Toronto, 1981

Sector	Total Employment	%	Establishments	%	Emp/Est
Office	439,034	41.3	23,996	38.0	18.30

What Kind of Place of Work

Close to half of all jobs in Metro are in establishments with more than 100 employees; on the other hand, over 62% of all establishments (including government and manufacturing) have no more than 5 employees and 34% have only one or two employees. The Figures III and IV illustrate the general relationships between the size of establishment and its contribution to the total employment picture. Detailed data for size of establishment by sector can be found in the Appendix.

OFFICE SECTOR

Office employment comprises the largest sector of employment within Metropolitan Toronto. The majority of these office workers (58%) are employed in the City of Toronto followed by the City of North York (24%). The City of Toronto contains 57% of Metropolitan Toronto's non-government office employment and 62% of its government office employment. North York, although it has a much smaller proportion of the office employment is still significant with 24% of Metropolitan Toronto's non-government office employment and 18% of the government office employment. The other area municipalities account for only 18% of all office employment Etobicoke (9%), Scarborough (7%), East York (1%) and York (1%).

The government offices within the smaller municipalities constitute a more significant proportion of their total office sector.

In terms of employees per establishment, the government offices are far larger in size than the non-government offices (Figure IV). North York and the City of Toronto have 122 and 102 employees per government office respectively and only 18 persons per non-government office.

MANUFACTURING SECTOR

The manufacturing sector in Metropolitan Toronto employs 28% of all Metro employees. The City of Toronto is not as significant a part of Metro's manufacturing as it is in other sectors. Employing 25% of the manufacturing workers, it is exceeded by North York at 29% and closely followed by Etobicoke at 23%. To complete the picture Scarborough, York and East York employ 15%, 4%, and 4% respectively.

The manufacturing sector is extremely significant within the municipalities. With the exception of the City of Toronto it employs over 30% of each municipality's total employment. Etobicoke, York and East York are particularly influenced (over 40%).

The warehouse/transportation subsector represents only 12% of the manufacturing sector. The City of Toronto employs 30% of Metropolitan Toronto's warehousing employees. Etobicoke and North York are close with 27% and 21% respectively. It is interesting to note that in the City of Toronto 80% of the establishments employ 5 or fewer people (65% employ 1 or 2). With more available space the other municipalities have a greater variety in size of warehousing establishment.

RETAIL SECTOR

Retail employment comprises 17% of the total employment in Metropolitan Toronto which makes it the second smallest sector. The City of Toronto contains the most retail workers with 42% of Metropolitan Toronto. It is followed by North York with 25%, Scarborough with 14%, Etobicoke with 13%, York with 4% and East York with 2%.

The retail sector is made up of retail shopping (57%) and retail service (i.e. dry cleaners, beauty parlours) (43%). Retail shopping and retail service are similar in their distribution throughout Metropolitan Toronto (Figure IV). The average number of retail workers per establishment ranges from 4 in York to an average of 9 persons per establishment in North York. While retail service establishments tend to be of a more uniform size, the retail shopping has a much wider spread between the smallest and largest establishments.

INSTITUTIONAL SECTOR

This is the smallest employment sector in Metropolitan Toronto. The institutional sector makes up 13% of Metropolitan Toronto's employment. The City of Toronto contains the most with 48%, North York 23%, Scarborough 12%, Etobicoke 10%, York 5% and East York 2%.

The average number of employees per institutional establishment is 35. North York and Toronto exceed that average; the other four municipalities fall below. The lowest average number of employees per institutional establishment is 26 (York); the highest is 42 (North York).

The institutional sector is actually made up of 3 subsectors - institutions, service accommodation and recreation. Institutions have 78% of the institutional employment; service accommodations employ 14%; and recreation employs 8%.

APPENDIX

REPORT ON EMPLOYMENT 1981

INTRODUCTION

This document is essentially a compendium of data generated from the 1981 Employment, Land Use and Assessment Data Bank (E.L.A.) and contains background data to the Employment 1981 report. The data presented below demonstrate only partially the extent of the E.L.A. Data Bank. More detailed geographical or sectoral breakdowns can be obtained from the Research Division, Metropolitan Toronto Planning Department, 11th Floor, East Tower, City Hall, Toronto, Ontario, M5H 2N1.

THE SURVEY

A 1980 listing was provided of all non-residential occupancies as identified from the Standard Assessment System data base, Ministry of Revenue, Province of Ontario. Student surveyors were hired to survey each establishment. During the visit to every premises, the surveyor enquired about the total full-time employment (defined as 20 or more hours worked per week) and the predominant activity, which he/she then translated into the appropriate code and entered on the survey sheet.

THE DATA

In the following tables this data has been aggregated geographically in decreasing order: Metropolitan Toronto, Area Municipalities, and Minor Planning Districts. Within this, it was categorized into 4 general employment activity sectors and 9 more specific categories:

4 sectors	9 categories
1. office	1. government office 2. non-government office
2. retail	3. retail shopping 4. retail service (i.e. dry cleaners, beauty parlours)
3. manufacturing	5. manufacturing 6. warehouse/transportation (i.e. bus terminal, storage)
4. institutional/other	7. service accommodation (i.e. motels, hotels, sanatoriums, homes for the aged) 8. institutional 9. recreation
